to Article 29 of the Regulation (EU)
No 305/2011 of the European
Parliament and of the Council of 9
March 2011

MEMBER OF EOTA

European Technical Assessment ETA-16/0550 of 09/08/2016

I General Part

Technical Assessment Body issuing the ETA and designated according to Article 29 of the Regulation (EU) No 305/2011: ETA-Danmark A/S

Trade name of the construction product:

GH Post bases

Product family to which the above construction product belongs:

Three-dimensional nailing plate (Post bases)

Manufacturer:

GH-Baubeschläge GmbH
Austraße 34
D-73235 Weilheim/Teck
Tel. +49 7023 743323 0
Fax +49 7023 743323 90
Internet www.holzverbinder.de

Manufacturing plant:

Werk 1, Werk 2

This European Technical Assessment contains:

53 pages including 2 annexes which form an integral part of the document

This European Technical Assessment is issued in accordance with Regulation (EU) No 305/2011, on the basis of:

Guideline for European Technical Approval (ETAG) No. 015 Three Dimensional Nailing Plates, April 2013, used as European Assessment Document (EAD).

This version replaces:

Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and should be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full (excepted the confidential Annex(es) referred to above). However, partial reproduction may be made, with the written consent of the issuing Technical Assessment Body. Any partial reproduction has to be identified as such.

II SPECIFIC PART OF THE EUROPEAN TECHNICAL ASSESSMENT

1 Technical description of product and intended use

Technical description of the product

The post bases are made from 4.0 mm to 15.0 mm thick steel plates in combination with reinforcing bars, threaded rods and steel tubes. The post bases are produced from steel grade S235JR according to EN 10025-2:2004 with minimum characteristic yield strength of $R_{eH} = 235 \text{ N/mm}^2$ and minimum characteristic tensile strength of $R_m = 360 \text{ N/mm}^2$ and from stainless steel according to EN 10088-2:2005 with minimum characteristic yield strength of $R_{p0,2} = 235 \text{ N/mm}^2$ and minimum characteristic tensile strength of $R_m = 360 \text{ N/mm}^2$. The reinforcing bars are produced from steel grade B 500 A according to EN 10080:2005 with minimum characteristic yield strength of $R_{eH} = 500 \text{ N/mm}^2$. The threaded rods with property class 4.8 according to EN ISO 898-1:2009-08 have a minimum characteristic yield strength of $R_{pf} = 320 \text{ N/mm}^2$.

For the connections with metal fasteners, bolts Ø12 mm (S235), dowels Ø8 mm, Ø10 mm and Ø12 mm (S235) and screws ø12 mm, ø10 mm, ø8 mm, ø4 mm according to EN 14592:2012 (DIN 571 and thread according to DIN 7998) with minimum characteristic tensile strength of $R_m = 360 \text{ N/mm}^2$ are used. The screws shall be driven into the wood after pre-drilling according to EN 1995-1-1, 10.4.5.

The outer diameter for washers of bolts shall not be less than $3 \cdot d_B$, where d_B is the diameter of the bolts. The thickness shall not be less than $0.3 \cdot d_B$.

Dimensions are shown in Annex A and B.

2 Specification of the intended use in accordance with the applicable EAD

The intended use of the post bases is the support of timber columns and posts as load-bearing elements, where requirements for mechanical resistance and stability and safety in use in the sense of the Basic Works Requirements 1 and 4 of Regulation (EU) 305/2011 shall be fulfilled.

The static and kinematical behaviour of the timber members or the supports shall be as described in Annex B.

The timber posts may be of solid timber of strength

class C24 or better according to EN 338:2009 or of glued laminated timber according to EN 14080:2013. Minimum dimensions for the post have to be considered (Annex A).

The post base shall be installed as pictured in the drawings. The cross-section of the timber column shall be positioned centrally and with the end grain plane on the base plate. The end grain of the timber post must in general be plane on the base plate of the post base. Post bases types H have a distance between the end grain of the timber post and the base plate of the post base up to 10 mm due to constructive wood preservation.

The maximum distance between the foundation and the base plate of the post base is given in Annex A, table A.1 (distance a).

Annex B states the load-carrying capacities of the post bases for solid timber of strength class C24 according to EN 338:2009. The design of the connections shall be in accordance with Eurocode 3 and Eurocode 5 or a similar national code. The anchorage of the post base in the foundation and imperfections exceeding the assumptions in Eurocode 5, 5.4.4 are not part of this ETA.

The post bases are for use in timber structures subject to the service classes 1, 2 and 3 of Eurocode 5 and for connections subject to static or quasi-static loading. The corrosion protection is given by hot-dip galvanizing with minimum thickness of 55 µm (plate with $3 \text{ mm} < t \leq 6 \text{ mm}$) and 70 µm (plate with $t > 6 \text{ mm}$) according to EN ISO 1461:2009, ZnNi coating and passivating with minimum thickness of 10 µm, zinc coating by galvanising (Fe/Zn 25c) or stainless steel.

The metal fasteners must also have a zinc coating for the intended use in service class 3 of EN 1995-1-1 (zinc coating Fe/Zn 25c according to EN ISO 2081:2008).

The scope of the hangers regarding resistance to corrosion shall be defined according to national provisions that apply at the installation site considering environmental conditions.

The provisions made in this European Technical Assessment are based on an assumed intended working life of the post bases of 50 years.

The indications given on the working life cannot be interpreted as a guarantee given by the producer or Assessment Body, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

Characteristic	Assessment of characteristic
3.1 Mechanical resistance and stability*) (BWR1)	
Characteristic load-carrying capacity	See Annex B
Stiffness	No performance determined
Ductility in cyclic testing	No performance determined
3.2 Safety in case of fire (BWR2)	
Reaction to fire	The post bases are made from steel classified as Euroclass A1 in accordance with EN 1350-1 and Commission Delegated Regulation 2016/364
3.3 Hygiene, health and the environment (BWR3)	
Influence on air quality	The product does not contain/release dangerous substances specified in TR 034, dated March 2012 0**)
3.7 Sustainable use of natural resources (BWR7)	No Performance Determined
3.8 General aspects related to the performance of the product	The post bases have been assessed as having satisfactory durability and serviceability when used in timber structures using the timber species described in Eurocode 5 and subject to the conditions defined by service class 1, 2 and 3
Identification	See Annex A

*) See additional information in section 3.9 – 3.11.

**) In addition to the specific clauses relating to dangerous substances contained in this European technical Assessment, there may be other requirements applicable to the products falling within its scope (e.g. transposed European legislation and national laws, regulations and administrative provisions). In order to meet the provisions of the Construction Products Regulation, these requirements need also to be complied with, when and where they apply.

3.9 Mechanical resistance and stability

Safety principles and partial factors

The characteristic load-carrying capacities are based on the characteristic values of the connections with metal fasteners, the steel components and the timber post.

In the case of timber failure or failure of the metal fasteners, the design values shall be calculated according to EN 1995-1-1 by dividing the characteristic values of the load-carrying capacities by different partial factors for the strength properties, and in addition multiplied with the coefficient k_{mod} .

In the case of steel failure, the design value shall be calculated according to EN 1993-1-1 by reducing the characteristic values of the load-carrying capacity with different partial factors.

The design value of the load-carrying capacity is the smaller value of all load-carrying capacities:

$$F_{\text{Rd}} = \min \left\{ \frac{k_{\text{mod}} \cdot F_{\text{Rk,T}}}{\gamma_{M,T}} ; \frac{F_{\text{Rk,S}}}{\gamma_{M_i,S}} \right\}$$

Therefore, for timber failure or failure of the metal fasteners the load duration class and the service class are included. The different partial factors γ_M for steel or timber failure, respectively, are also correctly taken into account

Mechanical resistance and stability

See Annex B for the characteristic load-carrying capacity in the different directions F_1 to F_5 for solid timber of strength class C24 according to EN 338:2009. Using the load-carrying capacities of the post bases, the specifications in Annex A must be fulfilled. The end grain of the timber post must in general be plane on the base plate of the post base. Post bases type H have a distance between the end grain of the timber post and the base plate of the post base up to 10 mm due to constructive wood preservation.

The characteristic capacities of the post bases are determined by a combination of calculation according to Eurocode 3 and Eurocode 5 and testing. They should be used for designs in accordance with Eurocode 3 and Eurocode 5 or a similar national code.

No performance has been determined in relation to ductility of a joint under cyclic testing. The contribution to the performance of structures in seismic zones, therefore, has not been assessed.

No performance has been determined in relation to the joint's stiffness properties - to be used for the analysis of the serviceability limit state.

No performance has been determined in relation to the anchorage of the post bases in the foundation. It must be checked by the designer of the structure to ensure it is not less than the post base capacity and, if necessary, the post base capacity reduced accordingly. Therefore the specifications for the lever arms $e_{F2/F3}$ (for load case F_2 / F_3) and $e_{F4/F5}$ (for load case F_4 / F_5) in annex A have to be considered. The lever arm is the distance between the top edge of the foundation and the load.

3.10 Aspects related to the performance of the product

2.7.1 Corrosion protection in service class 1 and 2.

In accordance with ETAG 015 the post bases are produced from steel grade S235JR according to EN 10025-2:2004 with minimum characteristic yield strength of $R_{eH} = 235 \text{ N/mm}^2$ and minimum characteristic tensile strength of $R_m = 360 \text{ N/mm}^2$ and from stainless steel according to EN 10088-2:2005 with minimum characteristic yield strength of $R_{p0,2} = 235 \text{ N/mm}^2$ and minimum characteristic tensile strength of $R_m = 360 \text{ N/mm}^2$. The reinforcing bars are produced from steel grade B 500 A according to EN 10080:2005 with minimum characteristic yield strength of $R_{eH} = 500 \text{ N/mm}^2$. The threaded rods with property class 4.8 according to EN ISO 898-1:2009-08 have a minimum characteristic yield strength of $R_{pf} = 320 \text{ N/mm}^2$.

The post bases are for use in timber structures subject to the service classes 1, 2 and 3 of Eurocode 5 and for connections subject to static or quasi-static loading. The corrosion protection is given by hot-dip galvanizing with minimum thickness of 55 μm (plate with $3 \text{ mm} < t \leq 6 \text{ mm}$) and 70 μm (plate with $t > 6 \text{ mm}$) according to EN ISO 1461:2009, ZnNi coating and passivating with minimum thickness of 10 μm , zinc coating by galvanising (Fe/Zn 25c) or stainless steel.

The metal fasteners must also have a zinc coating for the intended use in service class 3 of EN 1995-1-1 (zinc coating Fe/Zn 25c according to EN ISO 2081:2008).

3.11 General aspects related to the fitness for use of the product

The performances given in this ETA are based on the following:

- The timber post
 - shall be restrained against rotation, and supported at the lower and upper end
 - shall be strength class C24 or better according to EN 338:2009 or of glued laminated timber according to EN 14080:2013, see section 3 of

this evaluation report

- shall be free from wane in the post base
 - must fulfil the requirements regarding minimum dimensions (see Annex A)
 - end grain must in general be plane on the base plate of the post base; Post bases type H have a distance between the end grain of the timber post and the base plate of the post base up to 10 mm due to constructive wood preservation.
- The post base shall be installed centrically in the cross-section of the timber column.
 - The actual end bearing capacity of the timber member to be used in conjunction with the post base is checked by the designer of the structure to ensure it is not less than the post base capacity and, if necessary, the post base capacity reduced accordingly.
 - There are no specific requirements relating to preparation of the timber members.
 - The minimum insertion depth in the turnbuckles should be the diameter of the rod.
 - The base plates of the post bases with steel tubes as support must in general be plane on the tube's end.
 - The anchorage of the post base in the foundation is not part of this ETA. It must be checked by the designer of the structure to ensure it is not less than the post base capacity and, if necessary, the post base capacity reduced accordingly. Therefore, the specifications for the lever arms $e_{F2/F3}$ (for load case F_2 / F_3) and $e_{F4/F5}$ (for load case F_4 / F_5) in Annex A have to be considered. The lever arm is the distance between the top edge of the foundation and the load.

4 Attestation and verification of constancy of performance (AVCP)

4.1 AVCP system

According to the decision 97/638/EC of the European Commission¹, as amended, the system(s) of assessment and verification of constancy of performance (see Annex V to Regulation (EU) No 305/2011) is 2+.

5 Technical details necessary for the implementation of the AVCP system, as foreseen in the applicable EAD

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at ETA-Danmark

Issued in Copenhagen on 2016-08-09 by

Thomas Bruun
Managing Director, ETA-Danmark

¹⁾ screws according to EN 14592; threaded length $l_{ef}= 100$ mm²⁾ screws according to EN 14592; threaded length $l_{ef}= 40$ mm³⁾ screws according to EN 14592; threaded length $l_{ef}= 50$ mm⁴⁾ screws according to EN 14592; threaded length $l_{ef}= 60$ mm⁵⁾ dowels necessary in case of load direction F₁ (Tension); distance $a_{3,t}$ to the end grain has to be at least 80 mm

Table A.2 Specifications of the metal fasteners according to EN 14592

Fastener type	Size			Material	Finish
	Diameter	Length	Threaded length		
Screws	4 mm	min 60 mm	min 40 mm	$f_{u,k} \geq 360 \text{ N/mm}^2$	Galvanic zinc coating
Screws	8 mm	min 70 mm	min 50 mm	$f_{u,k} \geq 360 \text{ N/mm}^2$	Galvanic zinc coating
Screws	10 mm	min 60 mm	min 40 mm	$f_{u,k} \geq 360 \text{ N/mm}^2$	Galvanic zinc coating
Screws	10 mm	min 120 mm	min 100 mm	$f_{u,k} \geq 360 \text{ N/mm}^2$	Galvanic zinc coating
Screws	12 mm	min 80 mm	min 60 mm	$f_{u,k} \geq 360 \text{ N/mm}^2$	Galvanic zinc coating
Bolts	10 mm			$f_{u,k} \geq 360 \text{ N/mm}^2$	Galvanic zinc coating
Bolts	12 mm			$f_{u,k} \geq 360 \text{ N/mm}^2$	Galvanic zinc coating
Dowels	8 mm			$f_{u,k} \geq 360 \text{ N/mm}^2$	Galvanic zinc coating
Dowels	10 mm			$f_{u,k} \geq 360 \text{ N/mm}^2$	Galvanic zinc coating
Dowels	12 mm			$f_{u,k} \geq 360 \text{ N/mm}^2$	Galvanic zinc coating
The load-carrying-capacities of the metal fasteners were calculated according to Eurocode 5 for lateral loads. The contribution to the load-carrying capacity due to the rope effect was considered according to Eurocode 5.					

Annex B

Characteristic load-carrying capacities

^{*)} Characteristic load-carrying capacities for post bases are valid for base plates with t = 8 mm. In case of a thinner base plate t = 6 mm the marked values have to be multiplied by the reduction factors given in Table B.2. For post bases type 19812301, 19812302, 19812636, 19812303, 19812638, 19812639 a thinner base plate t = 6 mm does not have reducing effects on the characteristic load-carrying capacities.

^{**) Characteristic load-carrying capacities are only valid with installed dowels in case of load direction F₁ (Tension), independent of the adjustable height of the post base. Distance a_{3,t} to the end grain has to be at least 80 mm.}

$\gamma_{M,T}$ = partial factor for solid timber according to EN 1995-1-1 and national annex

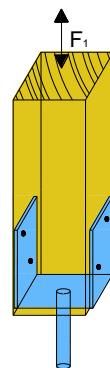

$\gamma_{M,C}$ = partial factor for connections according to EN 1995-1-1 and national annex

$\gamma_{M,0}; \gamma_{M,1}; \gamma_{M,2}$ = partial factor according to EN 1993-1-1 and national annex

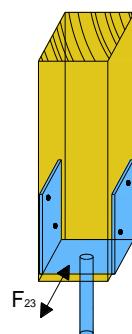

Table B.2 Reduction factor for the characteristic load-carrying capacities in case of base plates with t = 6 mm

1)	2)	3)	4)	5)	6)	7)	8)
0,67	0,72	0,75	0,81	0,84	0,86	0,90	0,93

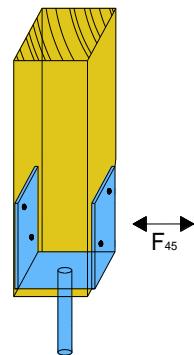

- Force F_1 : tensile or compression load

- Force F_2 / F_3 horizontal load parallel to the side plates /inner plate of the post base and perpendicular to the fasteners

- Force F_4 / F_5 horizontal load perpendicular to the side plates / inner plate of the post base and parallel to the fasteners

Acting forces

F_1	axial force (tension or compression) acting along the central axis of the joint
F_2 and F_3	horizontal force parallel to the side plates of the post base acting with the lever arm $e_{F2/F3}$ above the foundation
F_4 and F_5	horizontal force perpendicular to the side plates of the post base acting with the lever arm $e_{F4/F5}$ above the foundation

Combined forces

If the forces F_1 and F_2/F_3 or F_4/F_5 act at the same time, the following inequality shall be fulfilled:

$$\sum \frac{F_{i,Ed}}{F_{i,Rd}} \leq 1$$

The forces F_2 and F_3 or F_4 and F_5 are forces with opposite direction. Therefore only one force F_2 or F_3 , and F_4 or F_5 , respectively, is able to act simultaneously with F_1 .

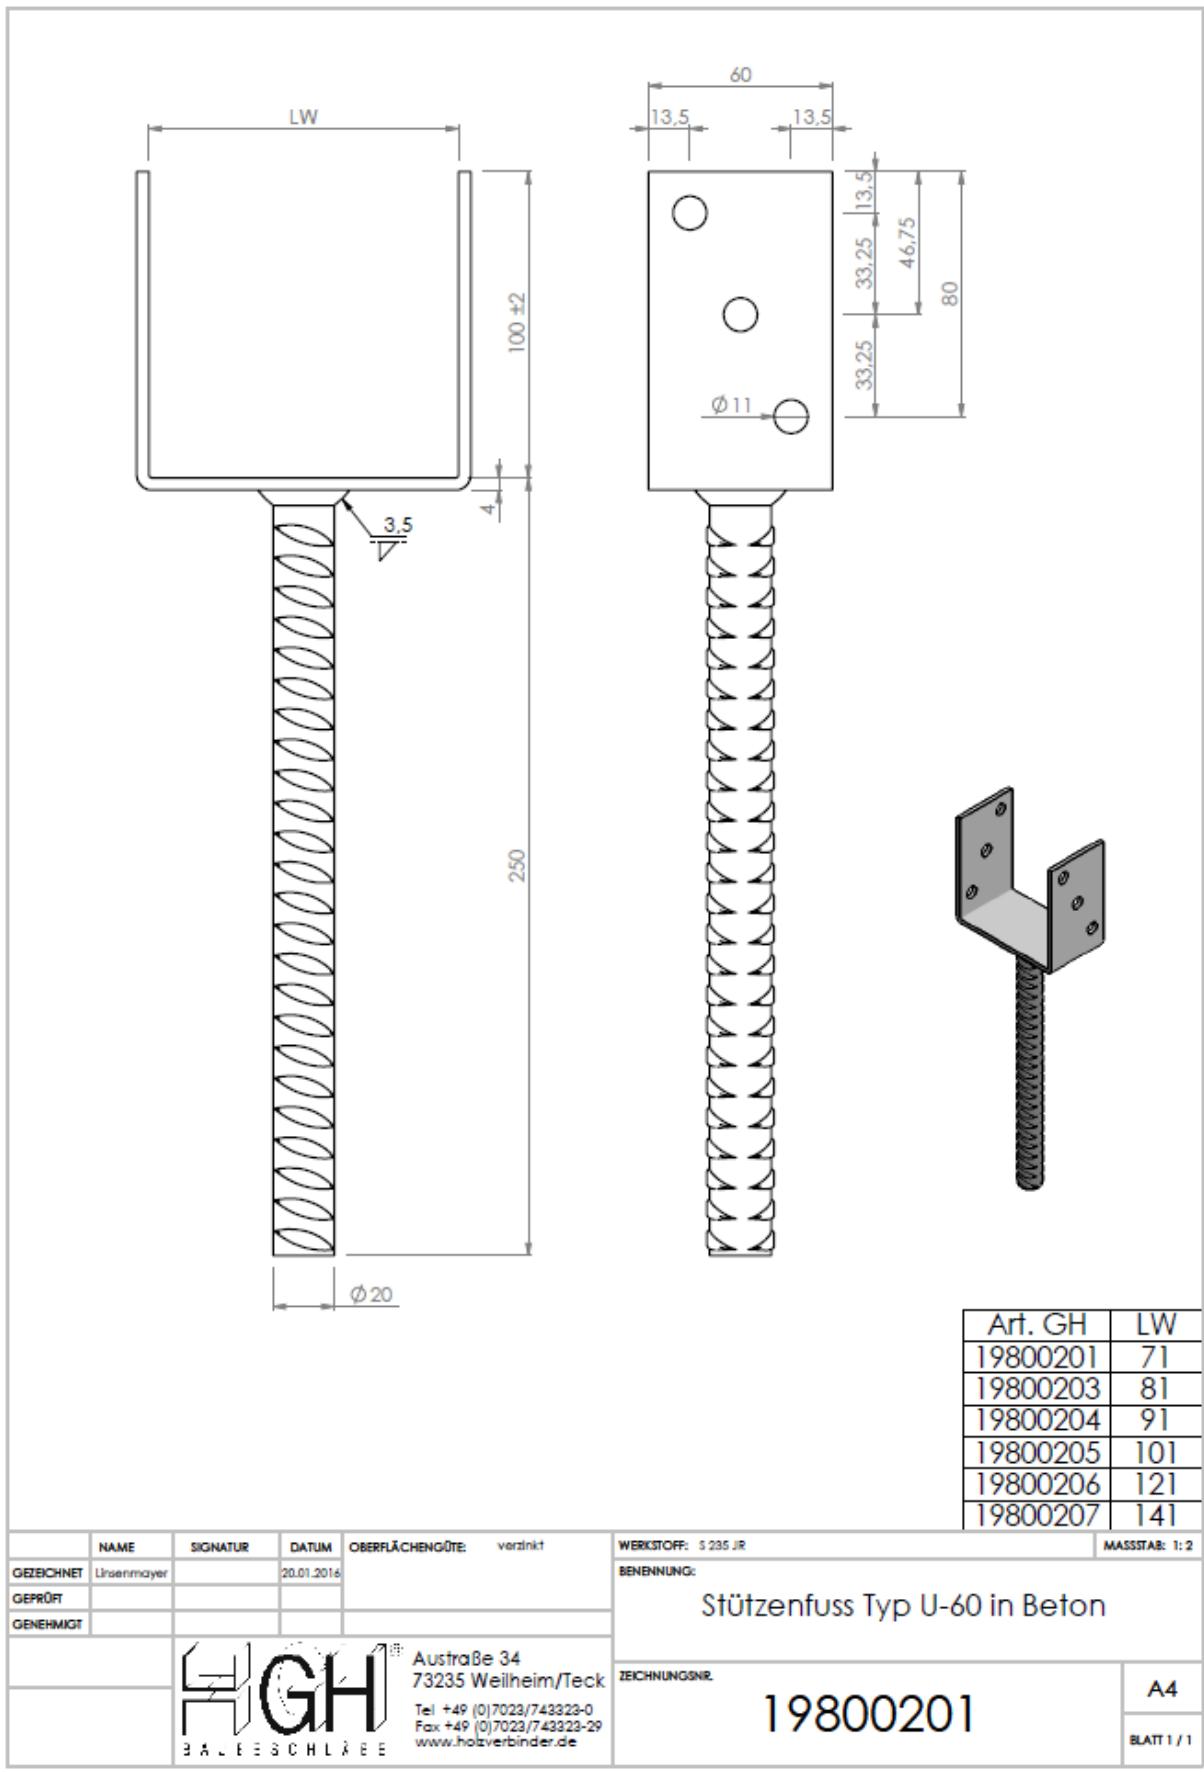

Threaded length of screws

Post bases with screws Ø10x120 mm ordered in the base plate the characteristic load-carrying capacity of the screw connection in load case F₁ - tension load may be calculated as following, if screws with a threaded length exceeding l_{ef,ref}=100 mm are used:

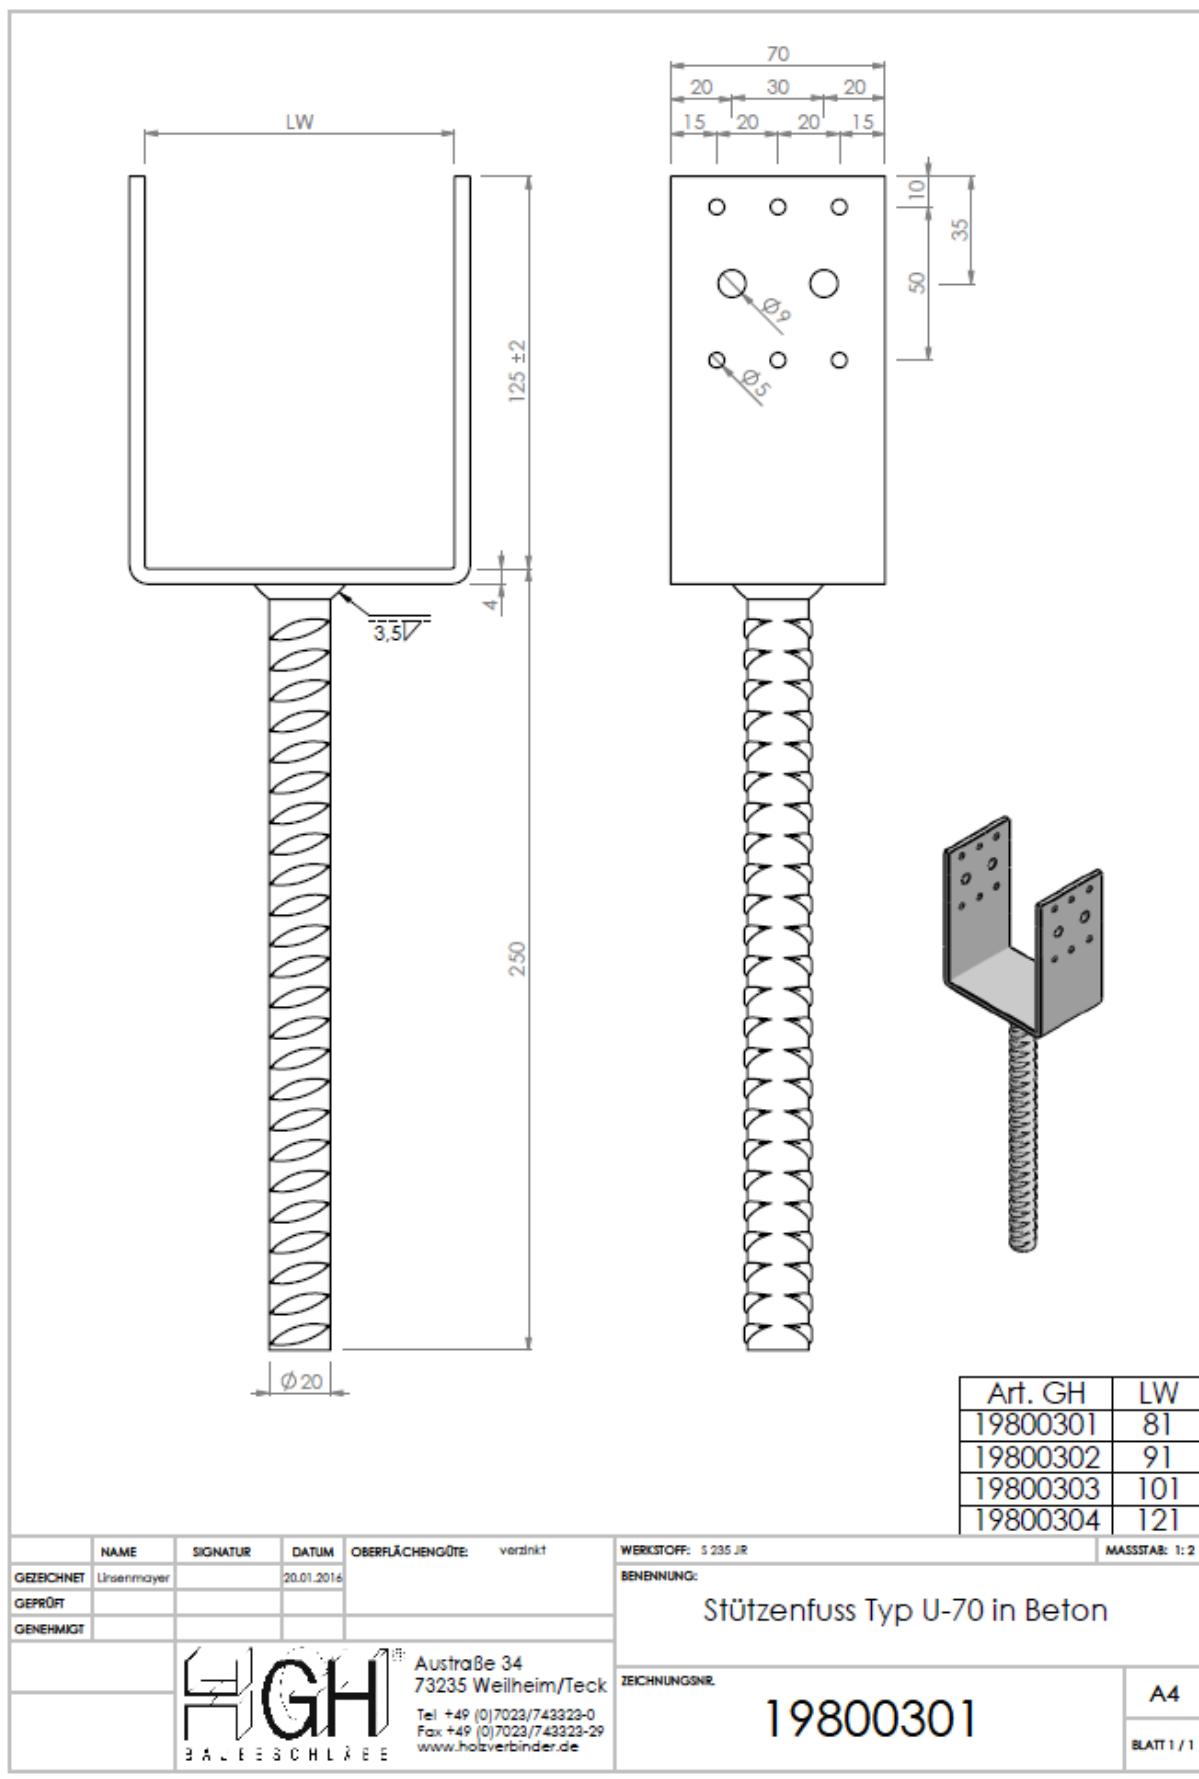

$$F_{1,T,T} = F_{1,T,T,ref} \cdot \left(\frac{l_{ef}}{l_{ef,ref}} \right)^{0,9}$$

Where F_{1,T,T,ref}=16,3 kN is the characteristic load-carrying capacity of the connection with 4 screws with a threaded length of l_{ef,ref}=100 mm.
